Oracle AWR Performance Assessment Report

Automated Diagnostic Summary

CONFIDENTIAL — FOR AUTHORIZED DBA USE ONLY

Report ID AWR-20260602-2224	Snapshots 4520 – 4521	Interval 26-Apr-2026 08:00 to 26-Apr-2026 09:00
---------------------------------------	---------------------------------	--

Executive Summary

Production Oracle 19c experienced sustained CPU pressure and I/O wait during the 60-minute snapshot window. Database health scored 72/100 (Medium risk). SQL_ID abc123 consumed 31% of database time; buffer busy waits indicate contention on transactional hot blocks. Prioritized index and SQL tuning are recommended before peak load.

Health Score Card

HEALTH SCORE	RISK CLASSIFICATION	DATABASE
72 /100	Medium	Production Oracle 19c PROD_ORCL

Risk Classification

Medium Risk

Medium risk classification is driven by: (1) CPU utilization peak of 78%, (2) buffer busy waits at 18% of DB time, and (3) single-statement concentration above 30% of total database time.

Key Findings

- High CPU Utilization — peak 78% during interval 5 of snapshot.
- Buffer Busy Waits — 18% of DB time on ORDERS index leaf blocks.
- Top SQL Bottleneck — SQL_ID abc123 at 31.2% of database time.
- Buffer cache hit ratio declined to 86.4% vs. 7-day baseline of 92%.

Top Wait Event Analysis

Wait Event	% DB Time	Waits	Severity
db file sequential read	42.3%	128,450	Critical
buffer busy waits	18.1%	45,220	Warning
log file sync	12.4%	89,102	Warning
CPU time	28.0%	—	Critical

Wait events ranked by percentage of database time during snapshot window.

Top SQL Analysis

SQL ID	% DB Time	Executions	Elapsed (s)	Module
abc123	31.2%	12,450	4,820	JDBC Thin Client
7x9k2f	14.8%	8,204	2,108	ORDER_BATCH
3m4n8p	9.1%	22,180	1,452	REPORT_GEN
9p2q1r	5.4%	4,890	890	ETL_LOADER

Recommendations

Priority	Recommendation
1	Tune SQL abc123 — rewrite correlated subquery; validate plan with SQL Tuning Advisor.
2	Add Index IDX_ORDERS_01 on ORDERS (CUSTOMER_ID, ORDER_DATE).
3	Increase PGA_AGGREGATE_TARGET (current max 512MB; recommend 1GB+).
4	Review ASSM and hot block mitigation for buffer busy waits on ORDERS.
5	Schedule statistics gathering on ORDERS and ORDER_LINES (stale > 14 days).
